# 00 — Package Index

SEION-KGR v26 MAX — Gate 12 Closeout Campaign

Campaign ID: gate12-closeout-2026-08-01
Canonical commit: `6af3c35271ae2ffab41ecba2aad098d1988fdc0c`
Branch: `campaign/gate12-closeout`
Date: 2026-08-01

Purpose: map this package, state the canonical commit, list checksums, explain how to reproduce every table and figure.

# Contents

## 1 Purpose

This package documents the `gate12-closeout` campaign executed against `voidzeit/seion-math-core`, branch `campaign/gate12-closeout`, starting from canonical commit `6af3c35271ae2ffab41ecba2aad098d1988fdc0c`. Its scope, per the campaign mandate's own Section X priority order under limited compute, is: full engineering closure (CI, learned selector, E8 residual branch, certification chain, evaluator/performance audit), a bounded and explicitly non-confirmatory screening pass on real benchmark data, real negative-control integration evidence, and this publication package. It is **not** a Gate 12 confirmatory statistical campaign — see `09_negative_results_limitations_and_open_problems.pdf` for the exact scope statement, repeated wherever a number could otherwise be misread.

## 2 Document map

| Document | Contents |
|---|---|
| 00 | This index |
| 01 | Decision-oriented executive summary |
| 02 | Mathematical foundations, epistemic status of every claim touched |
| 03 | Architecture, module-by-module, as it exists at campaign end |
| 04 | Screening-tier benchmark report (Tier 0) — explicitly not confirmatory |
| 05 | Ablations executed vs. preregistered, causal-control limitations |
| 06 | Projection/rank-controller: what exists and is tested, Pareto study status |
| 07 | Certification chain: what is certified, what is honestly not |
| 08 | Reproducibility, software, CI, parity checks, regeneration commands |
| 09 | Negative results, limitations, open problems — read this one |
| 10 | Full research-paper-style writeup |
| 11 | Supplement: hyperparameters, seed-level tables, artifact manifest |

## 3 Canonical identifiers

- Campaign ID: `gate12-closeout-2026-08-01`

- Starting commit: `6af3c35271ae2ffab41ecba2aad098d1988fdc0c`
- Branch: `campaign/gate12-closeout`
- Repository: https://github.com/voidzeit/seion-math-core

## 4 Artifact locations (outside this package, referenced by path + hash)

- `campaigns/gate12/preregistration.md` — frozen protocol, deviations log
- `campaigns/gate12/tier0_config.json`, `tier0_base_selection_result.json`
- `campaigns/gate12/negative_controls_results.json`
- `campaigns/gate12/tier0/` — run directories (gitignored, local evidence only; compact summaries committed separately)
- `docs/SEION_KGR_CLAIM_MATRIX.md`, `docs/SEION_KGR_ASSUMPTION_LEDGER.md` — updated this campaign with an explicit changelog section
- `tests/kgr/` — 120 tests, all passing at campaign end
- `.github/workflows/kgr-ci.yml` — real, executed CI (run id `30726372321`)

## 5 How to reproduce

See `08_reproducibility_software_and_artifacts.pdf` for exact commands. In brief: `python -m pytest tests/kgr -q` for the test suite; `python seion_kgr_v26_train.py -self_test` for the 16-combination trainer self-test; the Tier 0 commands are listed verbatim in that document and in `11_supplement.pdf`.

## 6 This document's own status

Definition. It is an index, not a claim.
