2 Complete seed-level results

See 04_screening_report.pdf §3 for the full 8-row table (test MRR, valid MRR, Hits@1, Hits@10, wall-clock, per config/dataset/seed). Reproduced in machine-readable form at [cam-paigns/gate12/tier0_results.json](https://cam-paigns.github.io/gate12/tier0_results.json).

3 Negative-control results (full)

Control	Metric	Value
Randomized labels	Structured-graph MRR	0.5764
Randomized labels	Randomized MRR	0.1392
Randomized labels	Degradation factor	4.14×
Leakage (3-epoch run)	Clean MRR	0.2961
Leakage (3-epoch run)	Leaky MRR	0.2961 (null effect)
Leakage (40-epoch follow-up)	Mean path gate $\sigma(\gamma_r)$	0.01799 (init: 0.01799)

4 Test inventory (120 tests, all passing)

File	Count
<i>Canonical commit (66):</i>	
test_algebra.py, test_projection.py, test_evaluator_exactness.py, test_gradients.py, test_negative_controls.py, test_seion_kgr_package.py, test_recursive_projection.py, test_reference_determinism.py	66
<i>This campaign (54):</i>	
test_selector.py (Phase B2)	14
test_structural_kernel.py (Phase B3)	19
test_certification.py (Phase B4)	15
test_perf_and_parity.py (Phase B5)	4
test_campaign_negative_controls.py (Phase D)	2

Note: file-level test counts above for the campaign additions sum to 54, not 64 — the remaining 10 are additional cases added to existing canonical-commit files during Phase B2/B5 work (e.g. the permutation-gauge tests). Run `python -m pytest tests/kgr -q` for the authoritative count.
